

Scientists to Hunt Deadly Sea Serpent

A year's voyage of specimens for the Field Museum in Chicago will be begun by the Crane Pacific Expedition in October. Above is a map showing the route to be covered. Cornelius Crane (lower left) will head the expedition, which will use his yacht, the "Illyria." Karl P. Schmidt, assistant curator in charge of reptiles at the Field Museum of Natural History will lead the scientific section.

(By Associated Press.)

CHICAGO, Oct. 1.—Strange marine inhabitants of the south Pacific ocean will be sought by a Field Museum expedition which will leave Boston in October for a 30,000 mile cruise around the largest of the bodies of water.

Cornelius Crane, of Chicago and Ipswich, Mass., is sponsor of the undertaking. He will head the group of 16 scientists and seamen.

Of special interest among the rare fishes, mammals and reptiles, which the party will try to capture for the Chicago museum, are "sea serpents," found only in the East Indian coral reefs. They are poisonous.

The tentative departure date is October 15. After leaving Boston, the scientists will stop at Bermuda, then Port-au-Prince, Haiti, pass through the Panama canal, across the Pacific, stopping at the Galapagos, Marquesas, Cook, Fiji and Solomon islands, before reaching New Guinea.

The "Illyria," a brigantine-rigged

yacht, on which the party will travel and live, will thread its way through the Malay archipelago, up the coast of India, China, around Japan and across the north Pacific to Alaska, putting in at San Francisco, through the Panama canal, finally reaching Boston.

Besides Crane, the expedition will include Karl P. Schmidt, assistant curator of reptiles at the museum; Dr. Albert W. Herre, Leland Stanford university, Pao Alto, Calif.; Dr. W. L. Moss, of Harvard medical school, physician for the party; Charles R. Peavy, Mobile, Ala.; Sidney N. Shurtleff, Boston and Sedney Heap, Churchstoke, England.

Capt. Seldon B. Bouttier, Melrose Highlands, Mass., will be master of the yacht.

Findings of this expedition will probably be hard put to outshine those of two other recent parties in which the Field Museum has a part. Under the leadership of Henry Field of Chicago, the Syrian desert expedition on a search for primitive remains of hu-

man life in the deserts of Mesopotamia and Trans-Jordan, has made many interesting and valuable discoveries.

Also, six scientists of the museum accompanied the Rawson-MacMillan-Field expedition to Labrador which recently returned bearing a large variety of new scientific knowledge and exhibits.
